Computer Exercise 1: Latex

Latex is a powerful typesetting language whose uses include an elegant and efficient way to write mathematics. Although Project 1 can be written up as you wish, I would like subsequent projects to be written in Latex. The purpose of this Computer Exercise is to give you functional proficiency in writing Latex documents.

The Assignment:

1. Install Latex on your machine
2. Use Latex to create the document “Latex Crashcourse: Revised”. Note that the basic template for the document Latex Crashcourse was passed out in class (and is available on the class website.) All you need you need to do is figure out how to make the appropriate stylistic changes.
3. Submit both your source code and your finished document in class on Friday, February 3.

This purpose of this assignment is to give you some practice using Latex. I will look to see that you’ve done the work, but not grade your assignment with any rigor (rigor will be reserved for class projects and exams.)
